

Nara™

Zoysia macrantha 'MAC03' (b)

DROUGHT TOLERANT TURF

A beautiful, fine textured native turf that is low maintenance and easy to establish.

- The first all purpose Australian Native Turf, Nara™ Zoysia is easy to grow and will cover the ground up to 3 times as fast as the common form of Zoysia.

- A beautiful fine textured lawn that people often choose on looks alone.

- It scalps less than Couch varieties, and requires less garden edging than Buffalo, Couch and Kikuyu.

- With vigorous deep rhizomes, Nara™ native turf is far more drought tolerant than other grasses such as Buffalo. Being native to Australia, it has had millions of years to grow and adapt to our hot dry and humid climates.

- When mown, it forms a dense mat but is not a thatchy turf. It is very good at competing with weeds, rarely gets disease and copes well with our bugs and insects.

- Has a very quick spring green up and has better winter colour than Couch varieties and other Zoysias.

- Nara™ native turf has survived down to -15° c in the USA, which means it's ideal for Canberra. It can be oversown with rye grass for an all year round green lawn.

- Is very salt tolerant and also grows well in fresh water. It establishes well in warm climates such as Queensland.

Description	Multi-purpose native turf
Mowing Height	2–5cm in sunny areas; 5–7cm in shade
Best Planting Time	September–April; avoid winter
Uses	Home and commercial use; coastal plantings
Position	Full sun to part shade; drought tolerant
Soil Type	Sandy, sandy loam, clay
Care	Low maintenance once established Water as required
More information	See www.naranativeturf.com.au

- Very popular with government departments, councils, developers, and the public as it is a good native turf.

- *Zoysia macrantha* is the natural native coastal grass for the east coast of Australia.
